NicLam – EUDR Implementation

Customer Information – September 2026

NicLam is actively preparing for the implementation of the EU Deforestation Regulation (EUDR) and is working to ensure that our processes and supply chain are aligned with the applicable requirements by the end of December 2026.

As part of this work, we are reviewing and adapting our internal processes and working with our suppliers and other relevant partners. Our preparations include ensuring access to the information and documentation required under EUDR, as well as establishing appropriate processes for traceability and due diligence.

Our objective is to ensure a smooth transition and continued reliable supply to our customers as the EUDR requirements come into effect.

The implementation work is ongoing, and we will continue to develop our processes as requirements and practical solutions are clarified. We will keep our customers informed of relevant developments and provide further information regarding EUDR-related documentation and processes as we approach the implementation deadline.

For any questions regarding NicLam's EUDR preparations, please contact fanny.fredin@niclam.se
